## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, in step “using the selected charge depleted threshold value to determine when to present information to a user of the device to indicate that the portable power source should be recharged” is unclear on what applicants want to regards? The sentence should be revised to make the claim clear and definable. Further, in claim 3, “selecting the first charge depleted threshold value to use when determining when to present information to a user of the device to indicate that the portable power source should be recharged” is unclear.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 5, 6, 11, 12-14, are rejected under 35 U.S.C. 102(b) as being anticipated by Laudau et al (US 5,284,719).

With respect to claims 1 and 11, Landau et al teach a method and apparatus for monitoring battery capacity for charging and monitoring comprising a portable power source; a power capacity detector operable coupled to the portable power source (figure 2); a first charge depleted threshold value and a second charge depleted threshold value that corresponds to a reduced amount of charge depletion as compared to the first charge depleted threshold value (column 2, lines 58-67) and providing selected threshold value based on the first charge depleted threshold or the second charge depleted threshold to inform a user (column 2 lines 58-67 and column 8, lines 13+) .

With respect to claims 2, 5, 6, 12-14 Landau et al teach wherein the power capacity detector comprises a voltage level detector (column 4, lines 14+); wherein the first charge depleted threshold value comprises at least a substantial complete level of charge depletion and wherein the second charge depleted threshold value comprises an historically derived charge depleted threshold value (column 2, lines 55-67 and column 23, lines 24-37). Detecting a user input and using the user input to select one of the first charge depleted threshold value and the second charge depleted threshold value to provide selected charge depleted threshold value (column 8, lines 13-46). A term automatically in claim 5 is inherently known in a function of program chip level (figure 3).

***Allowable Subject Matter***

5. Claims 3-4, 7-10, 15-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the

Art Unit: 2863

limitations of the base claim and any intervening claims and overcome the 112 rejection as set for above.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
